

Briquette Press for Dust Extractions

The briquette press is a sturdy, high-quality machine that compresses dust to compact briquettes. Due to its highly effective hydraulic system, the power consumption is low considering the briquette output. The machine is very quiet, requires little space and can be connected to most types of dust extractions.

Operation mode:

Dust is fed into the bin (approx. 1 m³) from the dust extraction unit. The agitator continuously fills the channel of the spiral output. The conveyor transports the dust to the pre-compressor then to the final press chamber. Compression is performed without binding agents. The briquettes are automatically pushed through a pipe until they are fed into a container or sack (not included).

Advantages:

- Reduced storage and transport costs
- Minimizes the risk of dust explosion
- Reduced manual handling of waste

Technical data:

Capacity: 30-60 kg/h
Power consumption: 5,5 kW
Briquette diameter: 50 mm
